

PROFESSIONAL SUMMARY

Backend Software Engineer with 5+ years of hands-on experience building and maintaining production-grade systems using Java (Spring Boot) and Python (Flask). Proven expertise in designing scalable APIs, backend automation, and AI-integrated platforms for enterprise and client-facing applications. Strong background in backend architecture, database optimization, CI/CD pipelines, and system reliability, with measurable improvements in performance and operational efficiency.

SKILLS

- **Core Technologies:** Java (5+ years), Spring Boot, Spring Security, JPA/Hibernate, Python (4+ years), Flask.
- **Backend & Architecture:** RESTful APIs, Microservices Architecture, Multithreading, System Design (HLD / LLD).
- **Databases & Storage:** PostgreSQL, MySQL, SQL Server, Redis, SAP HANA, S3-Compatible Object Storage.
- **ERP & Reporting:** SAP Business One (SAP B1), SAP HANA Studio, SAP ABAP, SAP MM consultant
- **Cloud & DevOps:** Linux, Nginx, DigitalOcean (VPS), Docker (working knowledge), GitHub Actions (CI/CD), SSH.
- **Messaging & Eventing:** NATS (Pub/Sub, Request-Reply, Queue Groups).
- **AI & Automation:** LLM API Integration, AI Automation Pipelines, RAG-based Systems, NLP.
- **Tools & Practices:** Git, Postman, Agile/Scrum, Code Reviews, Microservices, and Scalable Systems.

EXPERIENCE

Software Developer (Backend Engineering)

Atx Learning | Aug 2024 – Dec 2025 | Aligarh, India

- Led backend development of production-grade systems using Java (Spring Boot) and Python (Flask), owning API design, database modeling, and deployment workflows.
- Designed and maintained scalable RESTful APIs supporting client-facing applications handling 1,000+ daily API requests with high availability and stable performance.
- Architected and delivered an AI-powered real estate platform with backend-controlled workflows, real-time messaging, and appointment scheduling used in daily business operations.
- Built an AI-driven voice automation system that automated ~60% of appointment bookings, reducing manual administrative effort by 15+ hours per week.
- Developed backend services for employee analytics and reporting, used by 150+ active users, improving HR reporting efficiency by approximately 40%.
- Implemented CI/CD pipelines using GitHub Actions for automated build, test, and deployment to Linux-based VPS environments, reducing release effort by ~90%.
- Collaborated with frontend teams, product stakeholders, and management to deliver backend features under tight timelines and evolving business requirements.
- Mentored junior developers, conducted backend code reviews, and enforced clean code and scalable design practices.

Assistant Professor (Backend Systems & Software Development)

Lovely Professional University | Oct 2023 - May 2024| Jalandhar, India

- Designed and developed backend systems supporting large-scale academic and administrative platforms using Java (Spring Boot) and JPA/Hibernate.
- Built a backend attendance management system adopted by 2,000+ faculty users, reducing manual processing and reconciliation effort by approximately 70%.
- Developed a secure backend examination seating allocation system for 28,000+ students, implementing randomized and tamper-resistant logic to ensure operational integrity.
- Handled limited teaching responsibilities alongside hands-on backend system development.
- Worked closely with internal product and IT teams to align backend systems with operational requirements.

Data Analyst (Backend & Data Engineering)

LifeGen Bio | Jan 2023 - Oct 2023| Maharashtra, India

- Optimized PostgreSQL queries and backend data pipelines, improving reporting and analytics performance by approximately 50%.
- Built automated backend workflows and dashboards supporting inventory and operational decision-making.
- Developed predictive data models and backend logic to support inventory forecasting, enabling an estimated 10% reduction in overstock risk.

Programmer Analyst (Backend Software Engineering)

Cognizant | Sep 2021 - Dec 2022 | India

- Developed and maintained enterprise backend services using Java, Python, and SQL Server for client-facing applications.
- Built and integrated NLP-based machine learning pipelines into backend systems, improving model accuracy by approximately 15%.
- Developed backend reporting modules using JDBC and optimized SQL queries, supporting UAT and production environments.
- Collaborated with cross-functional teams to deliver backend features aligned with client requirements and timelines.
- Received two Certificates of Appreciation for technical contributions and delivery excellence.

Data Analyst (Data Engineering)

DPMI | Jun 2018 - Jun 2019 | Darbhanga, India

- Built and maintained backend data pipelines using Python and SQL, supporting KPI dashboards and reporting systems.
- Automated data ingestion and reporting workflows, improving data accuracy and operational visibility.

PROJECTS

AI-Powered Enterprise Help Desk & Ticketing System

- Designed and developed backend services using Python (Flask) and SQLAlchemy to manage ticket lifecycle, user roles, analytics, notifications, and secure file handling.
- Integrated Google Gemini LLM APIs to automate ticket classification, conversation summarization, and context-aware response generation, reducing agent handling time significantly.
- Implemented role-based access control (RBAC), audit logging, and secure request validation to meet enterprise security requirements.
- Built SMTP-based notification workflows and backend-driven status tracking to support operational teams.
- Improved backend performance through query optimization, efficient data modeling, and connection pooling.

Tech Stack: Python, Flask, SQLAlchemy, MySQL, LLM APIs.

AI-Powered Voice Assistant for Appointment Automation

- Developed backend services to handle speech-to-text processing, intent extraction, booking logic, and confirmation workflows.
- Designed transactional and conflict-free scheduling APIs to ensure reliable appointment booking under concurrent requests.
- Automated approximately 70% of appointment bookings, reducing manual administrative effort by ~20 hours per week.
- Built scalable backend workflows to support future integration with CRM and customer support systems.

Tech Stack: Java, Spring Boot, MySQL, React.

EDUCATION

- **Master of Technology (M.Tech)** – Computer Science & Engineering
BIT Mesra | 2021 | India
- **Bachelor of Technology (B.Tech)** – Computer Science & Engineering
Chaibasa Engineering College | 2018 | India

CERTIFICATIONS

- Google Project Management Professional Certificate – Coursera (System Planning, Execution, Monitoring & Delivery)
- System Design (HLD & LLD) – Scaler
- SAP S/4HANA: From ABAP to Cloud-Ready Applications

Additional Coursework:

- Project Initiation: Starting a Successful Project – Google
- Project Planning: Putting It All Together – Google
- Project Execution: Running the Project – Google
